## What are the 5 steps of the Moulting Plan?

## ¿Qué necesitamos conocer para cada fase?

### STEP 1 Disinfection of the loft

- Disinfect the loft eliminating all bacteria, viruses, fungi and parasites to avoid problems during the moulting. It is enough to make a disinfection before the moult and another at the end of the moult.

We will use:

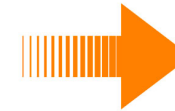

#### Rohnfried Desinfektion Pro 250gr

10gr of product per liter of water

- Remove pigeons from the loft.
- The surface to be disinfected should be slightly moist.
- Prepare the mixture and spray all surfaces to be disinfected and leave for at least 2 hours.
- Once the loft has been disinfected, ventilate it properly.

### STEP 2 Internal / External Deworming

- With the aim of eliminating worms, mites, responsible for diseases respiratory (lung worms), stress, intestinal worms. For that, we apply **Moxidectine Plus** (5 ml per liter of water for 2 consecutive days) and then we will give a bath to the pigeons with **New Ambush** (in 20 liters of water we add 40ml of Ambush)

We will use:

#### Moxidectine Plus

5ml por liter of water

#### New Ambush

for bath water.  
In 20 liters of water, we add 40ml

### STEP 3 General Moulting Plan (until the end of the moulting)

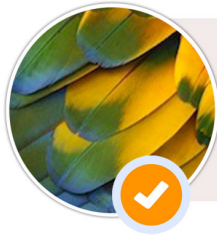

Products to be applied in the water:

Monday		<b>Nekton Bio</b> • 5gr per liter of water
Tuesday		• Clean water and food
Wednesday		<b>Nekton Bio</b> • 5gr per liter of water
Thursday		<b>Total Disinfection Solution</b> • 10ml por liter of water
Friday		<b>Nekton Bio</b> • 5gr per liter of water
Saturday		<b>Greenvet Green Tonic</b> • 2gr per liter of water
Sunday		<b>Greenvet Green Tonic</b> • 2gr per liter of water

In 1kg of eggfood **daily**:

	<b>Aviform Prolyte-C</b> • 5 gr
	<b>Fungi-Plus MS 100ml</b> • 5 ml

## How important is the plan?

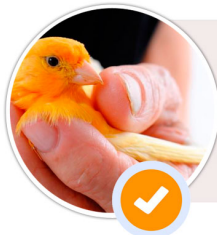

### Perfect feathers

Feather more healthy, silky, flexible and bright. A good plumage is key to obtain good results.

### Detoxification of the organism

It is essential to eliminate the accumulated toxins during the season of contests and breeding.

### Prevention of diseases

With this plan, the risk of diseases during moulting is reduced to a minimum and this way you will avoid having to use antibiotics, which are so harmful during moulting.

### You will avoid muscle problems

Following this plan, you will eliminate the excess of minerals and calcifications, cause of many joint and muscular problems during the moulting.

**The successes in the competitions begin to be forged during the moulting.**

A defective moult will mean that your pigeons will be at a disadvantage for the rest of the year.

### Why use this Moulting Plan?

1. Save time: It is a very simple Plan. It will not take you more than 15-20 minutes 2 days a week.
2. Save money: it contains the strictly necessary products.
3. Win in Tranquility: it is a Plan designed by a team of experts, using products of the best quality.
4. Effectiveness; It is a simple plan but at the same time very effective.
5. And most importantly, it is a Moulting Plan that WORKS.

### Una mala muda puede provocar:

- Palomas sin vitalidad, apáticas
- Plumaje defectuoso, lo que será una desventaja para el resto de la temporada
- Bajo rendimiento en las competiciones
- Mala reproducción, huevos de mala calidad y pichones débiles
- Problemas articulares y musculares

### Keep this in mind:

*The moulting is not the end of the season, it is the start of the next season.*
